

Global manufacturer optimizes production lines using AI

Background

This global wind turbine manufacturer operates several production sites globally. Each of the production facilities hold local stock to ensure continuous operation of the production lines and optimize equipment profitability.

Challenge

Low inventory accuracy that leads to production downtime.

1 minute of production downtime is costing them 7000 EUR, thus they need to ensure their inventory accuracy is at 99%+

Solution

By deploying Sentispec Inventory, this customer has achieved a higher degree of accuracy in stock levels and locations, ensuring less time is wasted retrieving stock to production, and crucially reducing equipment downtime and bottlenecks.
