

Scanning 100.000 pallets every month

Background

A global shipping and logistics company offers warehousing and distribution services to a range of retailers and manufacturers across Northern Europe.

Challenge

Stocktaking is a manual, labour-intensive, and costly process. For retailers & manufacturers, accurate stock levels and efficient loading are crucial, as they directly impact product availability. This transparency helps reduce out-of-stock situations, which in turn boosts revenue. Many high-profile clients require frequent, comprehensive stock audits, often involving 30,000 to 100,000 pallets. These audits demand significant resources and time dedicated to the stocktaking process.

Sentispec Inventory

- Notably higher customer satisfaction
- 5-8% Productivity improvement across N. Europe warehouses
- 95% reduction in missing pallet-related labour
- Stock Accuracy increased to 99.97%
- 5-10% Labour cost reduction across N. Europe warehousing

"The solution brings real change and efficiency from day one"

- Head of Warehousing and Distribution
